

DEPARTMENT OF INFORMATION TECHNOLOGY LAB MANUAL

CS23432 – Software Construction

(REGULATION 2023)

**RAJALAKSHMI ENGINEERING COLLEGE
Thandalam, Chennai-602015**

Name: Deepak R

Register No: 2116241001043

Year / Branch / Section: II / B.Tech IT - A

Semester: IV

Academic Year: 2025-2026

INDEX

S.No.	Date	Title
1.	21/01/26	Azure Devops Environment Setup.
2.	28/01/26	Azure Devops Project Setup and User Story Management.
3.	04/02/26	Setting Up Epics, Features, And User Stories for Project Planning.
4.	11/02/26	Sprint Planning.
5.	18/02/26	Poker Estimation.
6.	25/02/26	Designing Class and Sequence Diagrams for Project Architecture.
7.	11/03/26	Designing Architectural and ER Diagrams for Project Structure.
8.	18/03/26	Testing – Test Plans and Test Cases.
9.	25/03/26	Load Testing and Pipelines.
10.	08/04/26	GitHub: Project Structure & Naming Conventions.

EXP NO: 1

AZURE DEVOPS ENVIRONMENT SETUP

Aim:

To set up and access the Azure DevOps environment by creating an organization through the Azure portal.

INSTALLATION

1. Open your web browser and go to the Azure website: <https://azure.microsoft.com/en-us/getstarted/azure-portal>.

Sign in using your Microsoft account credentials.

If you don't have a Microsoft account, you can create one here: <https://signup.live.com/?lic=1>

2. Azure home page

3. Open DevOps environment in the Azure platform by typing *Azure DevOps Organizations* in the search bar.

4. Click on the **My Azure DevOps Organization** link and create an organization and you should be taken to the Azure DevOps Organization Home page.

Result: Successfully accessed the Azure DevOps environment and created a new organization through the Azure portal.

EXP NO: 2	AZURE DEVOPS PROJECT SETUP AND USER STOR MANAGEMENT
-----------	--

Aim:

To set up an Azure DevOps project for efficient collaboration and agile work management.

1.Create An Azure Account

2.Create the First Project in Your Organization

- a. After the organization is set up, you'll need to create your first **project**. This is where you'll begin to manage code, pipelines, work items, and more.
- b. On the organization's **Home page**, click on the **New Project** button.
- c. Enter the project name, description, and visibility options:
 - Name:** Choose a name for the project (e.g., **LMS**).
 - Description:** Optionally, add a description to provide more context about the project.
 - Visibility:** Choose whether you want the project to be **Private** (accessible only to those invited) or **Public** (accessible to anyone).
- d. Once you've filled out the details, click **Create** to set up your first project.

Create new project

Project name *

Cooking Recipe Sharing Platform

Description

Visibility

Private

Only people you give access to will be able to view this. Want to create a public project? [Try GitHub](#)

▼ **Advanced**

Cancel

Create

3. Once logged in, ensure you are in the correct organization. If you're part of multiple organizations, you can switch between them from the top left corner (next to your user profile). Click on the Organization name, and you should be taken to the Azure DevOps Organization Home page.

4. Project dashboard

5.To manage user stories:

- From the **left-hand navigation menu**, click on **Boards**. This will take you to the main **Boards** page, where you can manage work items, backlogs, and sprints.
- On the **work items** page, you'll see the option to **Add a work item** at the top. Alternatively, you can find a + button or **Add New Work Item** depending on the view you're in. From the **Add a work item** dropdown, select **User Story**. This will open a form to enter details for the new User Story.

Result:

Successfully created an Azure DevOps project with user story management and agile workflow setup.

EXP NO: 3

SETTING UP EPICS, FEATURES, AND USER STORIES

NO: 3

FOR PROJECT PLANNING

Aim:

To learn about how to create epics, user story, features, backlogs for your assigned project.

Create Epic, Features, User Stories, Task

The screenshot displays the Azure DevOps web interface for a project named 'Cooking recipe sharing platform Team'. The left sidebar shows the navigation menu with 'Backlogs' selected. The main area shows the backlog with the following items:

Order	Work Item Type	Title
1	User Story	User Story 1.1.1 Email & Password Registration
2	User Story	User Story 1.1.2 Email Verification
3	User Story	User Story 1.2.1 Standard Login
4	User Story	User Story 1.2.1 Remember Me / Persistent Login
5	User Story	User Story 2.1.1 Update Profile Information
6	User Story	User Story 2.1.2 Change Profile Picture
7	User Story	User Story 2.2.1 Set Dietary Preferences
8	User Story	User Story 2.2.2 Set Favorite Cuisines
9	User Story	User Story 2.1.1 View recipe details

The right sidebar shows the 'Planning' view with two iterations:

- Iteration 1**: Planned Effort: 0, 32 hours, 32 tasks.
- Iteration 2**: No work scheduled yet.

2.fill in user story details :

Azure DevOps - Microsoft Azure | My Information | Summary - Overview | Cooking recipe sharing platform | Ask Gemini | School

dev.azure.com/deepakr2024it/Cooking%20recipe%20sharing%20platform/_backlogs/backlog/Cooking%20recipe%20sharing%20platform%20Te... | Set as default

Azure DevOps | deepakr2024it | Cooking recipe sharing platform | Boards | Backlogs

USER STORY 28

28 User Story 1.1.1 Email & Password Registration

Deepak R | 0 Comments | Add Tag | Save and Close | Follow | Updated by Deepak R: Yesterday

State: New | Area: Cooking recipe sharing platform | Reason: New | Iteration: Cooking recipe sharing platform\Iteration 1 | Details | 2 | 2

Description

As a new user,
I want to sign up using my email and a password,
so that I can create an account and start using the platform.

Acceptance Criteria

1. The registration form must have fields for **email**, **password**, and **username**.
2. The password must meet the platform's security rules (e.g., minimum 8 characters, at least 1 number, 1 uppercase letter).

Result: Thus, the creation of epics, features, user story and task has been created successfully

EXP NO: 4	SPRINT PLANNING

Aim: To assign user story to specific sprint for Cooking recipe sharing platform

Sprint Planning:

Sprint1:

Sprint 2:

Azure DevOps deepakr2024it / Cooking recipe sharing platf... / Boards / Sprints

Cooring recipe sharing platform Team

Taskboard Backlog Capacity Analytics

Iteration 1 Person: Unassigned

No iteration dates Set dates

Collapse all	New	Active	Resolved	Closed
29 User Story 1.1.2 Email Verification New Kaviyarasu B	62 Task : Implement Email Verification for User Accounts New Unassigned			
30 User Story 1.2.1 Standard Login New Jovitha sheethal B	63 Task : Implement Standard User Login with Email and Password New Unassigned			
31 User Story 1.2.1 Remember Me / Persistent Login New Unassigned	64 Task : Implement "Remember Me" Feature for Persistent User Login New Unassigned			

Sprint3:

Azure DevOps deepakr2024it / Cooking recipe sharing platf... / Boards / Sprints

Cooring recipe sharing platform Team

Taskboard Backlog Capacity Analytics

Iteration 1 Person: Unassigned

No iteration dates Set dates

Collapse all	New	Active	Resolved	Closed
30 User Story 1.2.1 Standard Login New Jovitha sheethal B	63 Task : Implement Standard User Login with Email and Password New Unassigned			
31 User Story 1.2.1 Remember Me / Persistent Login New Unassigned	64 Task : Implement "Remember Me" Feature for Persistent User Login New Unassigned			
32 User Story 2.1.1 Update Profile Information New Unassigned	65 Task : Implement User Profile Update Feature New Unassigned

Result:

The Sprints are created for cooking recipe sharing platform project

EXP NO: 5	POKER ESTIMATION

Aim:

Create Poker Estimation for the user stories - cooking recipe sharing platform project

Planning Poker Estimation:

User Story 1: Submit Recipe

User Story ID: 01

Title: Submit Recipe

Description: As a User, I want to submit my cooking recipe with details like recipe name, ingredients, cooking steps, category, and preparation time so that other users can view and try my recipes.

Story Point Estimation: 5 Points

Team Poker Votes:

Team Member	Vote (Story Point)
Team Member 1	3
Team Member 2	5
Team Member 3	5
Team Member 4	8

Final Consensus: 5 Points

Reason for Estimation:

- Requires creating a recipe submission form with input validation.
- Backend logic should connect the recipe to the logged-in user (`req.user.id`).
- Database integration using the Recipe model in MongoDB/Mongoose.
- Includes handling recipe categories, ingredients, and cooking instructions.
- Requires image upload support for recipe photos.
-

Risks:

- Requires creating a recipe submission form with input validation.
- Backend logic should connect the recipe to the logged-in user (`req.user.id`).

Acceptance Criteria Covered:

- User can enter recipe name, ingredients, cooking steps, category, and cooking time.
- User can upload a recipe image.
- System automatically sets the recipe status as “Published”.
- Recipe is correctly linked to the logged-in user’s ID.
- Successful submission redirects the user to the recipe dashboard.

RESULT:

The Estimation/Story Points is created for the project using PokerEstimation.

EXP NO: 6

DESIGNING CLASS AND SEQUENCE DIAGRAMS FOR PROJECT ARCHITECTURE

Aim:

To Design a Class Diagram and Sequence Diagram for the given Project.

Class Diagram

Classes:

- User
- Recipe
- Comment
- Favorite

Key Attributes:

User: name, email, password, role (user,admin,chef), isVerified

Recipe: recipeName ,ingredients,cookingSteps,category,cookingTime,difficultyLevel,status

Comment: rating, commentText

Favorite: recipeId, userId

Relationships:

- User → creates → Recipe
- Admin → manages → Recipe
- Chef → reviews → Recipe
- User → submits → Comment
- Comment → belongs to → Recipe
- User → adds → Favorite
- Favorite → linked to → Recipe
- User → sends → ChatMessage
- ChatMessage → linked to → Recipe

6B. Sequence Diagram

Actors:

User / Admin / Chef → Frontend → Server → Database (DB)

Steps:

1. User enters registration details
2. Frontend sends register request to Server
3. Server saves user in DB
4. Server returns JWT token to User
5. User enters login credentials
6. Frontend sends login request to Server
7. Server verifies credentials in DB
8. Server returns JWT token to User
9. User submits a new recipe
10. Frontend sends recipe details with token to Server
11. Server saves recipe in DB
12. Server returns success response to User
13. Admin requests recipe dashboard data
14. Server fetches all recipes and users list from DB
15. Server returns recipes and users list to Admin
16. Admin reviews and approves the recipe
17. Server updates recipe status in DB
18. Chef requests assigned recipes for review
19. Server fetches assigned recipes from DB and returns to Chef

20. Chef reviews the recipe and marks it as "Verified"
21. Server updates recipe status to "Published" in DB
22. User searches and views recipes
23. Server fetches recipe data from DB and returns to User
24. User adds recipe to Favorites
25. Server stores favorite recipe details in DB
26. User submits comments and ratings for the recipe
27. Server saves comment and rating in DB
28. User sends chat message regarding the recipe
29. Server stores chat message in DB
30. Recipe sharing lifecycle completed successful

Condition: Bugs Found

- Admin rejects the recipe submission
- Server updates recipe status to "Rejected" in DB

Condition: Verified Successfully:

- Chef verifies the recipe
- Server updates status to "Published" in DB

Result: The Class Diagram and Sequence Diagram is designed Successfully for Cooking Recipe Sharing Platform.

EXP NO: 7	DESIGNING ARCHITECTURAL AND ER DIAGRAMS FOR PROJECT STRUCTURE

Aim:

To Design an Architectural Diagram and ER Diagram for the given Project.

7A. Architectural Diagram:

7B.ER Diagram:

Result:

The Architecture Diagram and ER Diagram is designed Successfully for the Service Management System.

EXP NO: 8 Create Epic, Features, User Stories, Task	TESTING – TEST PLANS AND TEST CASES
---	--

Aim:

Test Plans and Test Case and write two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

Test Case Design Procedure

Procedure:

- Identify system modules such as Login, Registration, Recipe Management, Favorites, and Admin Control.
- Define input values and expected outputs for each module.
- Create positive and negative test cases.
- Execute the test cases manually or using testing tools.
- Compare actual output with expected results.

GUIDELINES:

- 1. Use Clear Naming and IDs** ○ Test cases are named clearly ○ Helps in quick identification and linking to user stories or features.
- 2. Separate Test Suites** ○ Grouped test cases based on functionality ○ Improves organization and test execution flow in Azure DevOps.
- 3. Prioritize and Review** ○ Critical user actions are marked high-priority. ○ Reviewed for completeness and traceability against feature requirements.

New Test Case

3. Test case

Give two test cases for at least five user stories showcasing the happy path and error scenarios in azure DevOps platform.

Service Management System – Test Plans

USER STORIES:

- As a user, I want to sign up and log in securely so that I can access the Cooking Recipe Sharing Platform. (ID: 79)
- As a user, I need to view all recipes in one place. (ID: 76)
- As a user, I should be able to upload a recipe when needed. (ID: 73)
- As a user, I should be able to edit and update recipe details. (ID: 68)
- As a user, I need to receive notifications and updates about recipes and comments.

Test Suite

Test Suite: TS01 - User Login (ID: 86)

TC01 – Successful Sign Up

Action:

- Go to the Sign-Up page.
- Enter valid name, email, and password.
- Click "Sign Up".

Expected Results:

- Sign-Up form is displayed.
- Fields accept values without error.
- Account is created successfully.
- User is redirected to the dashboard.

Type:

Happy Path

TC02 – Secure Login

Action:

- Go to the Login page.
- Enter valid email and password.
- Click on "Login".

Expected Results:

- Login form is displayed.
- Fields accept valid data.
- User is logged in successfully.
- Dashboard page opens.

Type:

Happy Path

TC03 – Sign Up with Existing Email

Action:

- Go to the Sign-Up page.
- Enter a name and an already registered email.
- Click on "Sign Up".

Expected Results:

- Input fields accept data.
- Error message "Email already registered" is displayed.

Type:

Error Path

TC04 – Login with Wrong Password

Action:

- Go to the Login page.
- Enter valid email and incorrect password.
- Click on "Login".

Expected Results:

- Input is accepted.
- Error message "Invalid email or password" is shown.

Type:

Error Path

Test Suite: TS02 - View Recipes (ID: 87)

TC05 – View All Recipes Successfully

Action:

- Login successfully.
- Navigate to "Recipes".

Expected Results:

- All uploaded recipes are displayed clearly.
- Recipe title, image, and category are visible.

Type:

Happy Path

TC06 – Failed Recipe Loading

Action:

- Disconnect internet connection.
- Open "Recipes" page.

Expected Results:

- Recipes fail to load.
- Error message "Unable to load recipes" is displayed.

Type:

Error Path

Test Suite: TS03 - Upload Recipe (ID: 88)

TC07 – Upload Recipe Successfully

Action:

- Login successfully.
- Open "Upload Recipe".
- Enter recipe name, ingredients, cooking steps, and upload image.
- Click "Submit".

Expected Results:

- Recipe is uploaded successfully.
- Success message is displayed.
- Recipe appears in recipe list.

Type:

Happy Path

TC08 – Upload Recipe with Missing Fields

Action:

- Open "Upload Recipe".
- Leave recipe name empty.
- Click "Submit".

Expected Results:

- Validation error message "Recipe name is required" appears.
- Recipe is not uploaded.

Type:

Error Path

Test Suite: TS04 - Edit Recipe (ID: 89)

TC09 – Edit Recipe Successfully

Action:

- Login successfully.
- Open existing recipe.

- Change cooking time and ingredients.
- Click "Update".

Expected Results:

- Recipe details are updated successfully.
- Updated information is displayed.

Type:

Happy Path

TC10 – Edit Recipe with Invalid Data

Action:

- Open recipe edit page.
- Enter invalid cooking time value.
- Click "Update".

Expected Results:

- Error message "Invalid cooking time" is displayed.
- Changes are not saved.

Type:

Error Path

Test Suite: TS05 - Notifications and Comments (ID: 90)

TC11 – Receive Recipe Notification

Action:

- Another user comments on uploaded recipe.

Expected Results:

- Notification is sent to recipe owner.
- Notification appears in notification panel.

Type:

Happy Path

TC12 – Notification Failure

Action:

- Disable notification service.
- Trigger new comment notification.

Expected Results:

- Notification is not delivered.
- Error log is recorded in system.

Type:

Error Path

Test Suit 1:

The screenshot displays the Azure DevOps Test Plans interface for a project named 'Cooking recipe sharing platf...'. The left sidebar shows the navigation menu with 'Test Plans' selected. The main area shows the '1. Authentication' test suite, which is currently active. The test suite contains 16 test cases, all of which are 'Unassigned' and have a status of 'De' (Deferred).

Title	Order	Test Case Id	Assigned To	Stu
Register with valid data	1	95	Unassigned	De
Register with duplicate email	2	96	Unassigned	De
Register with duplicate username	3	97	Unassigned	De
Register with weak password (no uppercase)	4	98	Unassigned	De
Register with weak password (too short)	5	99	Unassigned	De
Register with missing required fields	6	100	Unassigned	De
Login with valid credentials via email	7	101	Unassigned	De
Login with valid credentials via username	8	102	Unassigned	De
Login with wrong password	9	103	Unassigned	De
Login with non-existent email	10	104	Unassigned	De
Login with remember me enabled	11	105	Unassigned	De
Access protected route without token	12	106	Unassigned	De
Access protected route with expired token	13	107	Unassigned	De

Test Suit 2 ;

The screenshot shows the Azure DevOps interface for a project named 'Cooing recipe sharing platf...'. The left sidebar lists various project components, with 'Test Plans' selected. The main area displays the '5. Security & Edge Cases' test suite, which is currently active. Below the suite name, there is a 'Test Suites' section with a filter by name. The right pane shows a list of 14 test cases, each with a title, order, test case ID, assigned to, and status. The test cases are listed in a table format.

Title	Order	Test Case Id	Assigned To	Status
Expired JWT is rejected	1	165	Unassigned	De
Tampered JWT signature is rejected	2	166	Unassigned	De
Favorites endpoint requires authentication	3	167	Unassigned	De
Customer order data isolated from other customers	4	168	Unassigned	De
Chef role cannot access admin-only data	5	169	Unassigned	De
XSS payload in recipe title stored safely	6	170	Unassigned	De
File upload rejects non-image extensions	7	171	Unassigned	De
File upload rejects oversized files	8	172	Unassigned	De
maxTime filter with non-numeric value	9	173	Unassigned	De
Recipe ID with invalid Objectid format	10	174	Unassigned	De
Register role field cannot be escalated via payload	11	175	Unassigned	De
Health check endpoint is publicly accessible	12	176	Unassigned	De
Static HTML templates are served correctly	13	177	Unassigned	De

4.Installation of test

The screenshot shows the Chrome Web Store page for the 'Test & Feedback' extension. The page features a search bar, a 'Discover' tab, and a 'Test & Feedback' section with a 'Featured' badge, a 4.2 star rating from 175 reviews, and a 'Share' button. Below this, there are two main images: one showing a 'Capture & Annotate' interface with a play button and a text box, and another showing a 'CAPTURE' interface with a list of actions (1. Screenshot, 2. Screen recordings, 3. Annotations, 4. Image action log, 5. Page load data) and a 'New Bug' form. The page also includes a 'Workflow & Planning' section and a '200,000 users' badge.

5.The test cases are tested successfully and the results are noted.

Result:

The test plans and test cases for the user stories is created in Azure DevOps with Happy Path and Error path

EXP NO: 9	LOAD TESTING AND PIPELINES

Aim:

To create an Azure Load Testing resource and run a load test to evaluate the performance of the Cooking Recipe Sharing Platform and to create and demonstrate an Azure DevOps pipeline for automating application builds, tests, and deployment.

Load Testing

Description:

This experiment demonstrates how load testing is performed for the Cooking Recipe Sharing Platform to evaluate system performance under multiple user requests. The testing checks response time, request handling, and system stability during heavy traffic conditions when users browse recipes, search food items, and upload cooking content..

Steps:

Install Load Testing Tool:

1. Download and install Apache JMeter.
2. Open JMeter and create a new Test Plan.
3. Add Thread Group to simulate multiple users.

Create Load Test Configuration

Configure the following components inside JMeter:

- ☐ Thread Group
- ☐ HTTP Request Sampler
- ☐ Listener for Results
- ☐ Summary Report

Load Test Configuration

Number of Users (Threads): 50

Ramp-Up Period: 10 Seconds

Loop Count: 5

Server Name: localhost

Port Number: 5000

Request Type: GET

Path: /api/requests

Load Testing Steps

Step 1: Create Thread Group

- ☐ Add multiple virtual users.
- ☐ Configure ramp-up time and loop count.

Step 2: Add HTTP Request

- ☐ Configure API endpoint for testing.
- ☐ Select request method such as GET or POST.

Step 3: Add Listener

- ☐ Add Summary Report and View Results Tree. ☐
Monitor request success and failures.

Step 4: Execute Load Test

- ☐ Run the test plan.
- ☐ Observe response time, throughput, and error rate.

Pipelines:

Description:

This experiment demonstrates how to connect a GitHub-hosted Cooking Recipe Sharing Platform project with Azure DevOps. The pipeline automatically installs frontend and backend dependencies, builds the application, and publishes artifacts. This helps ensure that every commit triggers automated build validation and smooth deployment

Steps:

Connect GitHub to Azure DevOps:

1. Open Azure DevOps and create a new project.
2. Create a new pipeline and select GitHub as the source.
3. Authorize Azure DevOps to access the GitHub repository.
4. Select the Cooking Recipe Sharing Platform repository.

Pipeline Tasks Include:

- ☐ Connecting GitHub repository with Azure DevOps.
- ☐ Installing backend dependencies using npm.
- ☐ Building backend services.
- ☐ Installing frontend dependencies.
- ☐ Building the React/Vite frontend application.
- ☐ Running verification steps to ensure successful execution. ☐
- Publishing build artifacts

Pipelines:

The screenshot shows the Azure DevOps interface for a project named 'Cooing recipe sharing platf...'. The left sidebar contains navigation links: Overview, Boards, Repos, Pipelines (selected), Environments, Library, XAML, Test Plans, and Artifacts. The main area is titled 'Pipelines' and has tabs for 'Recent', 'All', and 'Runs'. A 'New pipeline' button is in the top right. Below the tabs, a 'Filter pipelines' button is visible. The 'Recently run pipelines' section displays a table with two columns: 'Pipeline' and 'Last run'. One pipeline is listed: 'Deepak49-afk.Cooking-Recipe-Sharing-...' with a status of 'Individual CI for main' and a last run time of '3m ago' (12s).

The screenshot shows the details of a specific pipeline run: '#20260511.1 • Set up CI with Azure Pipelines'. The breadcrumb trail indicates the path: 'Cooing recipe sharing platf...' / 'Pipelines' / 'Deepak49-afk.Cooking-Reci...' / '20260511.1'. The left sidebar is the same as the previous screenshot. The main area shows the run details. A message states: 'This run is being retained as one of 3 recent runs by pipeline.' with a 'View retention leases' button. Below this is a 'Summary' section with a 'View change' button and a 'Parameters' button. The summary includes: 'Individual CI by Deepak49-afk', 'Repository and version: Deepak49-afk/Cooking-Recipe-Sharing-... 72ea0b4e', 'Time started and elapsed: Just now 12s', 'Related: 0 work items, 0 artifacts', and 'Tests and coverage: Get started'. The 'Stages' section shows a single stage 'Stage' with '1 job completed' in '8s'. Below the stage, a 'Job' is listed as '3s'. A 'Rerun Stage' button is at the bottom.

Result: Successfully created the Azure Load Testing resource and executed a load test to assess the performance of the specified endpoint and also demonstrated pipelines in azure devops.

EXP NO: 10	GITHUB: PROJECT STRUCTURE & NAMING CONVENTIONS

Aim:

To provide a clear and organized view of the project's folder structure and file naming conventions, helping contributors and users easily understand, navigate, and extend the Cooking Recipe Sharing Platform project.

GitHub Project Structure

Result:

The GitHub repository clearly displays the organized project structure and consistent naming conventions, making it easy for users and contributors to understand and navigate the codebase.
